

Les applications et serveurs web pour git : l'exemple Github

Thibault Clérice

Octobre X, 2017

1. Github, gitlab, etc. : pourquoi ?

- ▶ Serveur distant
- ▶ Gestion d'équipe
- ▶ Gestion de bug et de tickets (Issues)
- ▶ Gestion de fusion de branche et de "review"

2. Github : les issues

Les issues peuvent correspondre à plusieurs choses :

- ▶ un bug : on donne alors un titre au bug
 - ▶ si c'est dans le cadre d'un logiciel/d'une application/d'un site, on donne la démarche pour le reproduire
 - ▶ on pense à donner les fichiers concernés par le bug
 - ▶ on essaye de décrire au mieux le problème. Même si c'est sur notre propre dépôt
 - ▶ Sinon, on oublie le bug, on revient deux mois plus tard, on sait plus ce que c'est.
- ▶ une nouveauté : on veut une nouvelle fonctionnalité, un nouvel ensemble de données
 - ▶ on décrit correctement ce que l'on veut, de manière à pouvoir transférer la charge ou s'en occuper soi même plus tard

Les issues peuvent être attribuées à des membres du dépôt : si je travaille avec @vincentjolivet, et qu'un bug le concerne, je peux lui attribuer en tant que membre. Sinon, en voyant un bug qui me concerne, je peux me l'attribuer.

Les issues peuvent avoir des labels. Une série de label par défaut existe mais on peut tout à fait en rajouter à ses propres dépôts.

Language subtags #1548

[Edit](#)[New Issue](#)

annettegessner opened this issue on Jun 29 · 3 comments

annettegessner commented on Jun 29

Owner

I spotted some incoherence in our use of language tags. Do we have our own list of abbreviations that we use? If yes, please direct me to it! If not:

[Epidoc](#) states, that the [IANA Language Subtag Registry](#) should be used and I would follow this advise.

Here are some examples of language subtags we need on a regular basis according to this recommended list:

en --> English

de --> German

(el --> Modern Greek)

grc --> Ancient Greek

la --> Latin

mul --> multiple languages

Some of the deviations I found in First1kGreek:

"eng" instead of "en" for English

"lat" instead of "la" for Latin

"ger" or "deu" instead of "de" for German

"el" which is Modern Greek, when it should be Ancient Greek "grc"

There are two different instances, where we used those subtags:

1. language id="" --> to define the languages used in the body of the XML (i.e. the languages the text itself is written in)
2. xml:lang="" --> to define language used in (a section in) the header

Please let me know, if you agree with these abbreviations, so we can start fixing these!
